

**Satellite Internet for  
Resorts • Businesses • Government  
in the Caribbean**

# Residing in a remote area shouldn't mean sacrificing reliable broadband Internet service

At SkyFidelity, we understand that in many parts of the Caribbean, land-based communications are not always practical.

## Remote Rugged Conditions

All SkyFidelity equipment is designed for working in the most remote and demanding conditions. We will customize a solution that's just right for you, on our reliable and highly-secure network, to optimize productivity, even in the most isolated areas.

Unlike companies that recommend consumer-grade equipment to commercial customers, all SkyFidelity rural satellite Internet solutions are business-grade. Every component of the SkyFidelity network is made for commercial use and will deliver business-grade satellite Internet.

We own our own infrastructure and designed everything for business—not consumer—use. Which means from our multiple teleports and satellite hubs, to the routers and servers, every component in our system is commercial-grade.

*SkyFidelity offers applications such as live streaming video, VOIP, email, texting and other internet based communications to customer sites.*

## High-Speed Satellite Internet

SkyFidelity's core strength is bringing in satellite internet to customers and distributing the feed for live streaming video, VOIP, email, texting and other internet based communications where there is no existing fiber or cable internet available in the area.

SkyFidelity combines satellite internet "footprints" with industrial strength WiFi Access Points that can withstand the environment to create a "WiFi Internet Cloud". SkyFidelity also focuses on industries where we offer live streaming camera surveillance as well as WiFi hot spots providing a "communications corridor" in remote locations.

### WiFi Hot Zones

SkyFidelity creates industrial strength WiFi Access Points that can withstand the environment to create a "WiFi Internet Cloud". These WiFi Zones enable WiFi equipment monitoring by HD Camera Surveillance (live feed 24/7); and WiFi Internet/Phone connectivity in remote and underserved locations.

### Camera Surveillance

SkyFidelity can rapidly deploy security monitoring camera systems and time-lapse web cameras onto remote sites at very short notice and provide HD quality live video streaming camera solutions for security monitoring cameras or web cameras over our high speed Satellite Broadband service. Our WiFi Zones enable WiFi equipment monitoring by HD Camera Surveillance (live feed 24/7). Furthermore, SkyFidelity offers a variety of plans including fixed solutions, mobile satellite Internet solutions, rental solutions, and fixed dishes.

*"Satellite based camera security systems for police and law enforcement available"*

### VoIP

The SkyFidelity network is independent of local landline infrastructure for a reliable satellite Internet VoIP connection. Satellite Internet VoIP (Voice over Internet Protocol) allows you to make a call over the Internet with the clarity of a landline or cell phone. Browse, send/receive email, download files, and make a call, all at the same time. VoIP calls using our secure VPNs (Virtual Private Networks) and Private Networks at encryption levels that satisfy even the most security-conscious agencies. Using the SkyFidelity VoIP network means clear voice reception and a great satellite Internet VoIP experience.

# SkyFidelity Satellite Internet Service Plans

The Caribbean needs a communication plan with unmatched reliability. A powerful network with the ability to support a wide range of applications for communications, from VoIP and satellite Internet VPN to streaming data and video.

Satellite Internet access is often an essential part of Caribbean communications. While most companies make empty promises about transmission speeds, SkyFidelity makes guarantees with our all inclusive service plans.
