

# Internet Telemedicine Delivers Care — *Anywhere*

# Internet telemedicine can significantly improve the quality of medicine you provide your patients.

Studies show that 40% of rural residents travel 30 minutes or more just to receive medical care of any kind, let alone specialty care. Healthcare telemedicine communication is changing that by making quality healthcare accessible anywhere in the world through two-way, interactive, real-time communication over the Internet.

Not only are telemedicine solutions giving underserved populations access to urban medical centers, but they also enable new level of care by facilitating the quick exchange of EMR (Electronic Medical Records) and digital images. In effect, they are creating an Internet medical center available anywhere.

These solutions are revolutionizing patient care, but they only work if there is a reliable Internet connection. As part of their our focus, SkyFidelity is dedicated to making sure that there can always be a connection to what matters most, anywhere, at any time.

## Satellite for primary connectivity

SkyFidelity provides lightning fast broadband Internet via satellite for telemedicine & telehealth at reliability rates that routinely top 99%. Our service:

- Is metered to offer uncongested, low-latency data transmission.
- Provides a direct connection to the U.S. Internet backbone for fewer points of congestion or failure.
- Features telemedicine communication solutions that are customizable to your specific needs. Fixed satellite dishes can mount to poles, roofs, or vehicles and provide mobile and portable solutions so you can deliver medicine and healthcare to patients where, and when, it matters most

Unlike land-based ISPs (Internet Service Providers) that rely solely on the local infrastructure to support your Internet telemedicine needs, a SkyFidelity satellite connection isn't vulnerable to the same natural or man-made disasters, which can interrupt your service with something as simple as a water main break or power outage.

## Satellite for business continuity and EMR

Using SkyFidelity satellite for telemedicine & telehealth keeps your healthcare facility running and gives you access to patients' Electronic Medical Records at all times. We provide redundant Internet access that gives you the ability to automatically switch traffic among multiple Internet connections. When one link goes down, you get WAN/ISP failover that automatically switches your critical Internet telemedicine traffic to your SkyFidelity connection, for access to cloud-based EMRs, even when terrestrial lines go down. Meanwhile, – quality of service prioritization guarantees bandwidth to your most important telemedicine & telehealth applications.

## SkyFidelity satellite for security

We realize HIPAA compliance is critical to Internet telemedicine. That is why we use satellite internetVPN (Virtual Private Networks) and Private IP (Internet Protocol) networks at encryption levels that satisfy even the most security-conscious federal agencies. You can be confident that when you use SkyFidelity Internet for communications, you can exchange EMRs and hold two-way audio and video conferences, while keeping patient information protected.

## Make Internet telemedicine a part of your practice

SkyFidelity can provide the broadband access you need in as fast as 10 days, for Internet telemedicine that will significantly improve the quality of medicine you provide your patients.

## SkyFidelity Satellite Internet Service Plans

SkyFidelity solutions are revolutionizing patient care, but they only work if there is a reliable Internet connection. As part of their our focus, SkyFidelity is dedicated to making sure that there can always be a connection to what matters most, anywhere, at any time.
